magmodules

Magento 2 Versions and Support

for

Understanding which Magento version you're running and when to upgrade is crucial for security and compatibility. This guide covers version support, our extension compatibility, and upgrade guidance.

Current Magento Versions

Actively Supported

Version	Release Date	End of Support	Status
2.4.7	April 2024	April 2027	Current
2.4.6	March 2023	March 2026	Supported

End of Life

Version	End of Support	Status
2.4.5	August 2025	EOL Soon
2.4.4	April 2025	EOL Soon
2.4.3 and earlier	Already EOL	Unsupported
2.3.x	September 2022	Unsupported

Important: Running end-of-life versions means no security patches. Upgrade as soon as possible.

Magmodules Extension Compatibility

Our extensions support the following minimum Magento versions:

Extension Type	Minimum Version
New extensions	2.4.4+
Existing extensions	2.4.4+ (updated)
Legacy support	Contact us

We actively test against all supported Magento versions (2.4.6, 2.4.7) and recommend staying on the latest patch release.

Checking Your Magento Version

Via Admin Panel

Go to the admin footer - the version is displayed at the bottom right.

Via CLI

```
bin/magento --version
```

Via Composer

```
composer show magento/product-community-edition
# or for Commerce
composer show magento/product-enterprise-edition
```

Via Files

Check `composer.json` in your Magento root:

```
grep "magento/product" composer.json
```

When to Upgrade

Must Upgrade

- Running an EOL version (no security patches)
- Security vulnerabilities announced for your version
- Required for extension compatibility
- PCI compliance requirements

Should Upgrade

- Missing features available in newer versions
- Performance improvements in newer releases
- Bug fixes affecting your store
- Before your version reaches EOL

Plan Carefully

- Major version upgrades (2.3 → 2.4) require significant testing
- Minor upgrades (2.4.6 → 2.4.7) are usually smoother
- Patch upgrades (2.4.7 → 2.4.7-p1) are low risk

Upgrade Process Overview

1. Prepare

- Back up database and files
- Document all customizations
- List all installed extensions
- Review changelog for breaking changes

2. Test Environment

- Create staging environment with current version
- Upgrade staging first
- Test all functionality thoroughly
- Verify all extensions work

3. Upgrade Commands

```
# Enable maintenance mode
bin/magento maintenance:enable

# Update Magento version
composer require magento/product-community-edition=2.4.7 --no-update
composer update

# Run upgrade
bin/magento setup:upgrade
bin/magento setup:di:compile
bin/magento setup:static-content:deploy -f

# Clear cache and disable maintenance
bin/magento cache:flush
bin/magento maintenance:disable
```

4. Post-Upgrade

- Verify admin access
- Test frontend functionality
- Check all payment methods
- Verify order processing
- Test all third-party integrations

Common Upgrade Issues

Extension Conflicts

Some extensions may not support the new version. Options:

1. Update the extension first
2. Contact the extension vendor
3. Temporarily disable the extension
4. Find an alternative extension

Database Schema Changes

If you see database errors:

```
bin/magento setup:upgrade --keep-generated
bin/magento setup:db-schema:upgrade
bin/magento setup:db-data:upgrade
```

Dependency Conflicts

Composer conflicts with package versions:

```
composer why-not magento/product-community-edition 2.4.7
```

This shows which packages block the upgrade.

Magento Open Source vs Adobe Commerce

Feature	Open Source	Commerce
Price	Free	Licensed

Feature	Open Source	Commerce
Support	Community	Adobe
B2B Features	No	Yes
Page Builder	Basic	Advanced
Cloud Option	No	Yes

Our extensions work with both Open Source and Commerce editions.

Version Numbering

Magento uses semantic versioning:

```
2.4.7-p1
| | | └── Patch number (security/hotfix)
| | └──── Minor version (features)
| └────── Major version (breaking changes)
└──────── Platform version
```

- **Patch releases** (p1, p2): Security fixes only, safe to apply
- **Minor releases** (2.4.6 → 2.4.7): New features, some testing needed
- **Major releases** (2.3 → 2.4): Significant changes, full testing required
