CLI Commands

Spotler Activate Search for Magento 2

Command line tools for managing Spotler Activate Search feeds. Use these for manual feed generation, testing, or automation.

Available Commands

Command	Description
`sooqr:feed:create`	Generate the product feed

sooqr:feed:create

Generates the XML product feed for Spotler.

```
bin/magento sooqr:feed:create
```

Output:

```
Feed generated successfully for store: Default Store View
File: /var/www/html/pub/media/sooqr/feed.xml
Products: 1542
```

Options

Option	Description
`--store-id=X`	Generate feed for specific store view only

Generate for Specific Store

```
bin/magento sooqr:feed:create --store-id=1
```

Only generates the feed for store view ID 1. Useful for multi-store setups where you only need to update one store.

Generate for All Stores

```
bin/magento sooqr:feed:create
```

Without the `--store-id` option, generates feeds for all enabled store views.

When to Use

- **After bulk imports** - Immediately update feed with new products
- **After major price changes** - Ensure Spotler has current prices
- **Testing configuration** - Verify feed generates correctly
- **Troubleshooting** - Check for errors during generation

Cron vs Manual

The module includes automatic cron-based generation (configured in Data > General > Cron Frequency). Use the CLI command for:

- Immediate updates outside cron schedule
- Testing after configuration changes
- Integration with deployment scripts

Example: Post-Deployment Script

```
#!/bin/bash
# After deployment, regenerate feed
bin/magento sooqr:feed:create
```

Exit Codes

Code	Meaning
0	Success
1	Error during generation
