Bol.com Accounts

Bol.com Integration for Magento 2

Accounts connect your Magento store to your Bol.com seller accounts. You can configure multiple accounts if you sell under different Bol.com seller names.

Location: Bol.com → Configuration → Accounts

Creating an Account

1. Click **Add New Account**
2. Configure the General settings
3. Configure Order Import settings
4. Click **Save**

General Settings

Enabled

Enable or disable this account. Disabled accounts won't sync offers or import orders.

Name

Internal name for this account. Use something descriptive like "Main Account" or "Brand X Account".

Is Demo

Enable if using Bol.com demo/sandbox API credentials. Demo mode connects to the test environment instead of production.

Client ID

Your Bol.com API Client ID. Get this from your Bol.com Partner Portal under **Settings → API Settings**.

Client Secret

Your Bol.com API Client Secret. Keep this secure - treat it like a password.

Order Import Settings

Enabled

Enable order import for this account. When enabled, orders from Bol.com will be fetched and can be created in Magento.

Import Orders From

The starting date for order import. Orders placed before this date will not be imported.

Tip: Set this to today when first setting up, then backdate if needed.

Store View

Which Magento store view to create orders in. This affects product data, prices, and customer settings.

Product Identifier

Which product attribute holds the EAN/barcode. Bol.com identifies products by EAN, so this must match.

Common options:

- `sku` - If your SKUs are EANs
- `ean` - Dedicated EAN attribute
- `barcode` - Custom barcode attribute

Default Shipping Method

The shipping method applied to imported orders.

Fallback Shipping Method

Used if the default shipping method is unavailable.

Import Customers

Whether to create customer accounts for Bol.com buyers. If disabled, orders are created as guest orders.

Customer Group

Which customer group to assign to imported customers.

Separate House Number

If enabled, the house number is placed in the second street line instead of being appended to the address.

Use when: Your checkout or ERP requires house numbers in a separate field.

Use Bol.com Order ID

Use the Bol.com order ID as the Magento order increment ID instead of generating a new one.

Order ID Prefix

Prefix added to order increment IDs when using Bol.com Order ID. For example, "BOL-" results in "BOL-123456789".

Import Orders With

Select which fulfilment types to import:

- **FBR** - Fulfilled by Retailer (you ship)
- **FBB** - Fulfilled by Bol (Bol ships from their warehouse)

Auto Ship FBB Order Items

Automatically create shipments for FBB orders since Bol.com handles the actual shipping.

Testing the Connection

After saving, verify your credentials work:

```
bin/magento magmodules-bol:test-connection
```

Or test a specific account:

```
bin/magento magmodules-bol:test-connection 1
```

Multiple Accounts

You can create multiple accounts for:

- Different Bol.com seller accounts
- Separate demo and production environments
- Different business units or brands

Each Product Profile is linked to one account.
