Quick Start Guide

Spotler Activate Search for Magento 2

This is the quick start guide for Spotler Activate Search. We'll get your search feed generated and the frontend search working in about 10 minutes. This covers the essentials - connecting your account, generating your first feed, and enabling the search overlay.

Prerequisites

- Module installed and cache cleared
- A Spotler Activate Search account
- Your Sooqr Account ID (format: SQ-123456-1)

Step 1: Enable the Module

Navigate to: **Stores > Configuration > Spotler > General**

Set **Enable** to **Yes** and save.

Step 2: Enter Account ID

Still in **General > Credentials**:

1. Select your **Environment** (Production or Staging)
2. Switch to the store view scope (top left dropdown)
3. Enter your **Sooqr Account ID** (e.g., SQ-123456-1)
4. Save configuration

Tip: Find your Account ID in your Spotler dashboard under account settings.

Step 3: Enable Feed Generation

Navigate to: **Stores > Configuration > Spotler > Data**

In the **General** section:

- Set **Enable** to **Yes**
- **Filename** can stay default or customize
- Set **Cron Frequency** for automatic updates

Save configuration.

Step 4: Generate Your First Feed

Run the CLI command:

```
bin/magento sooqr:feed:create
```

Or generate from admin:

- Go to **Spotler > Feed Log** (menu)
- Click **Generate Feed** button

The feed URL appears in the configuration under **Data > General** - copy this for Spotler.

Step 5: Enable Frontend Search

Navigate to: **Stores > Configuration > Spotler > Search**

In **Frontend Implementation**:

- Set **Enable Search** to **Yes**
- Choose your **Sooqr Loader** preference

Save and clear cache.

Verify It Works

1. **Feed:** Check the feed log grid at **Spotler > Feed Log** - should show successful generation
2. **Search:** Visit your frontend and use the search box - Spotler overlay should appear

What's Next

The basic setup is done. For optimal results:

- Configure attribute mapping in **Data > Product Data**
- Set up product type handling (configurable, bundle, grouped)
- Add filters to exclude out-of-stock or hidden products
- Enable CMS pages export if you want them searchable
