# Quick Start Guide

Dealer Locator for Magento 2

This is the quick start guide for the Dealer Locator. In about five minutes you'll have a working "Find a dealer" page: we switch the module on, pick a map provider, add your first dealers and check the page on your storefront. We use OpenStreetMap here because it works without an API key, so you can see results straight away; switching to Google Maps later is a matter of two keys. If you just installed the module and want to see it working before fine-tuning anything, start here. Everything you set up in these steps can be changed later without losing your dealers.

Get the Dealer Locator running in 5 minutes.

## Prerequisites

- Module installed
- Cache cleared
- A few dealer addresses at hand (or the sample file from the import page)

## Step 1: Enable the Module

Navigate to: **Stores → Configuration → Magmodules → Dealer Locator → General**

Configure:

- **Enabled:** Yes

## Step 2: Choose a Map Provider

Navigate to: **Stores → Configuration → Magmodules → Dealer Locator → Map & Geocoding**

Configure:

- **Map Provider:** OpenStreetMap (free, no API key)

That's all you need for now. Prefer Google Maps? Choose it here and fill in the **Google Maps Browser API Key** and the **Google Geocoding Server API Key**; the configuration guide explains which restrictions each key needs.

Save the configuration.

## Step 3: Add Your Dealers

Navigate to: **Content → Dealer Locator → Dealers**

The quickest way to see results is the sample file:

1. Click **Download Sample CSV**. It contains four fictional dealers at real public addresses in the Netherlands, Belgium and Germany.
2. Click **Import CSV**, choose the file and click **Import**. Leave the options as they are.
3. The report shows "Created: 4". The module looked up the map coordinates from the addresses and created the product categories from the file. One sample dealer is inactive, so the storefront shows three.

Or add a dealer by hand with **Add New Dealer**: fill in a code, name, address and country, and leave latitude and longitude empty. After saving, the message shows the coordinates that were found.

## Step 4: Check the Page

Open your store at `/dealers`, for example `https://example.com/dealers`.

You should see:

- The dealers in a list, with a map next to it (on mobile: List and Map tabs)
- Search for "Utrecht": the list is now sorted by distance, nearest first
- Click **Show on map** at a dealer: the map zooms to it and opens its details

**Tip:** Want the page on another address, such as `/stores` or `/service/dealers`? Change the **URL Key** under **Page & SEO**.
