magmodules

Quick Start Guide

Omnibus Directive for Magento 2

This is the quick start guide for the Omnibus Directive extension. In about five minutes you'll have the "lowest price in the last 30 days" showing next to your reduced prices. We'll switch the module on, record the current prices of your catalog, check the display settings and verify the result on a real product page. If you just want to get compliant quickly and fine-tune later, this is the page to follow.

Get Omnibus Directive running in 5 minutes.

Prerequisites

- Module installed
- Cache cleared
- Magento cron running (the module uses it for daily snapshots and the async queue)

Step 1: Enable the Extension

Navigate to: Stores → Configuration → Magmodules → Omnibus Directive → General

Configure:

- Enabled: Yes

From this moment every price change is recorded per store view.

Step 2: Record the Current Prices

The module needs a starting point: the price each product has today. The daily cron takes a snapshot at 01:30, but you can do it right away:

```
bin/magento omnibus:snapshot
```

The command records the current price of every product in every enabled store view and calculates the lowest prices. Running it again later is safe: only changed prices are recorded.

Tip: Prices that were reduced before you installed the module have no history yet. For those products the current price is shown as the lowest price until there is 30 days of history.

Step 3: Check the Display Settings

Navigate to: Stores → Configuration → Magmodules → Omnibus Directive → Frontend

Configure:

- Display Mode: Only on Sale
- Label Text: Lowest price in the 30 days before this discount:
- Show on Listing: Yes
- Show on Product Page: Yes

"Only on Sale" shows the lowest price only when the product actually has a reduced price, which is what the directive requires.

Step 4: Run the Selftest

Click **Run Self-test** at the top of the configuration page. All six checks should pass: PHP version, Magento version, extension enabled, cron, indexer and price history.

Step 5: Verify on the Storefront

1. Pick a product and give it a special price below its regular price
2. Save the product
3. Open the product page

Below the price you'll see "Lowest price in the 30 days before this discount: €...". The same line appears on category pages and in search results.
