## CLI Commands

Bol.com Integration for Magento 2

Run Bol.com integration commands from the terminal for testing, debugging, and manual operations.

**Usage:** Run from your Magento root directory.

## Test Connection

---

Test API connectivity for your Bol.com accounts.

```
# Test all accounts
bin/magento magmodules-bol:test-connection

# Test specific account
bin/magento magmodules-bol:test-connection 1
```

### Output:

- Success: Confirms API connection works
- Failure: Shows error message with details

### Use when:

- Setting up a new account
- Troubleshooting API issues
- Verifying credentials after changes

## Import Orders

---

Import orders from Bol.com into Magento.

```
# Import from all accounts
bin/magento magmodules-bol:import-orders

# Import from specific account
bin/magento magmodules-bol:import-orders 1
```

### What it does:

1. Fetches open orders from Bol.com API
2. Creates Magento orders for new items
3. Updates order statuses as needed

### Use when:

- Testing order import setup
- Manually importing after downtime
- Debugging order import issues

## Export Offers

---

Export product offers to Bol.com.

```
bin/magento magmodules-bol:export-offers
```

### What it does:

1. Collects offers pending export
2. Sends offer data to Bol.com API
3. Updates local sync status

### Use when:

- Testing offer export setup
- Forcing immediate sync
- After bulk product updates

## Export Shipments

---

Export shipment information to Bol.com.

```
bin/magento magmodules-bol:export-shipments
```

### What it does:

1. Finds shipments pending export
2. Sends shipment data to Bol.com
3. Updates export status

### Use when:

- Testing shipment export
- Syncing after manual shipment creation
- Recovering from export failures

## Import Competing Offers

---

Fetch competitor pricing data from Bol.com.

```
bin/magento magmodules-bol:import-offer-lists
```

### What it does:

1. Gets competing offer data for your EANs
2. Stores competitor prices and conditions
3. Updates Competing Offers grid

### Use when:

- Analyzing competition manually
- Updating pricing strategy
- Checking market position

## Process Product Profiles

---

Process product profiles to generate or update offers.

```
bin/magento magmodules-bol:process-product-profiles
```

### What it does:

1. Evaluates profile conditions against products
2. Creates new offers for matching products
3. Updates existing offers with profile changes
4. Removes offers for non-matching products

### Use when:

- After creating/editing profiles
- After bulk product imports
- Testing profile conditions

## Process Queue

---

Process the synchronization queue.

```
bin/magento magmodules-bol:process-queue
```

**What it does:**

1. Processes pending queue items
2. Executes scheduled sync operations
3. Handles retry logic for failed items

**Use when:**

- Queue processing is delayed
- Clearing backlog manually
- Debugging sync issues

## Upload Invoices

---

**Since 1.7.0**

Upload pending customer invoices to Bol.com.

```
# Upload for all accounts
bin/magento magmodules-bol:upload-invoices

# Upload for specific account
bin/magento magmodules-bol:upload-invoices --account_id=1
```

**What it does:**

1. Finds pending/error invoices in the queue
2. Generates PDF from Magento invoice
3. Uploads PDF to Bol.com API
4. Updates invoice status (Synced/Error/Failed)

**Use when:**

- Testing invoice upload setup
- Manually uploading after errors
- Debugging invoice upload issues

**Note:** Invoices are automatically queued when shipments are exported. The PDF must be under 2 MB.

## Common Options

---

Most commands support these patterns:

```
# Verbose output
bin/magento magmodules-bol:command-name -v

# Very verbose output
bin/magento magmodules-bol:command-name -vv

# Debug output
bin/magento magmodules-bol:command-name -vvv
```

## Automation

---

These commands run automatically via Magento cron. Configure frequencies at:

**Location:** Stores → Configuration → Bol.com → Cron Settings
