

Quick Start Guide

Cross-Linking for Magento 2

This is the quick start guide for the [Cross-Linking extension](#). We'll get you up and running in about 5 minutes. This covers the basics — enabling the module, creating your first cross-link rule, and verifying it works on your store. If you want to quickly start building internal links without manually editing content, you're in the right place.

4 steps to get it working.

Prerequisites

- Module installed via composer
- Cache cleared
- At least one product, category or CMS page with text content

Step 1: Enable the Extension

Navigate to: **Stores** → **Configuration** → **Magmodules** → **Cross-Linking** → **General**

Configure:

- **Enabled:** Yes
- **Case Insensitive:** Yes (recommended for most stores)

Step 2: Enable Entity Types

In the same configuration section, configure which content types should have cross-links:

Products section:

- **Enable for Products:** Yes
- **Max Links Per Page:** 10

Categories section:

- **Enable for Categories:** Yes
- **Max Links Per Page:** 10

CMS Pages section:

- **Enable for CMS Pages:** Yes
- **Max Links Per Page:** 10

Step 3: Create Your First Cross-Link Rule

Navigate to: **Marketing** → **Cross-Links**

Click **Add New Cross-Link** and configure:

- **Keyword:** The word or phrase to match (e.g., "yoga mats")
- **URL:** The link target (e.g., `/collections/yoga-mats.html`)
- **Max Replacements:** 1 (replace only the first occurrence per page)
- **Active:** Yes
- **Store Views:** All Store Views

Save the rule.

Step 4: Test Your Configuration

1. Clear the cache: **System** → **Cache Management** → **Flush Magento Cache**
2. Visit a product page, category page or CMS page that contains your keyword
3. Verify the keyword is now a clickable link pointing to the URL you configured
4. View page source and search for your URL to confirm the anchor tag is present

Tip: You can also use the CLI preview command to verify replacements without visiting the frontend:

```
bin/magento magmodules:crosslinking:preview --entity-type=product --entity-id=42
```

This shows the before/after output so you can confirm links are being inserted correctly.

Verification Checklist

- Module is enabled in General settings
- At least one entity type (Products/Categories/CMS) is enabled
- Cross-link rule is active and has correct keyword + URL
- The keyword actually exists in the page content (not inside an existing link)
- Cache has been flushed after making changes
