

## Install through FTP and SSH

Snelstart Integration for Magento 2

# Install through FTP and SSH

---

- 1 1. Installation Guide
- 2 Start Using the Extension
- 3 2. Upload Files
- 4 3. Connect to your Magento® Webserver using SSH

## 1. Installation Guide

---

You can start the installation by downloading the [Snelstart Integration](#) extension package (.zip) and the magento2-accounting-base.zip files from your Magmodules or Marketplace dashboard-account under my downloads and follow the installation instructions below.

**Note:** We strongly recommend testing your installation in a development environment prior to releasing it to production. Also, make sure you have a full backup available of your store, more information on this can be found [here](#).

### Start Using the Extension

---

Once the installation is complete, the extension is successfully installed in your Magento® 2 store and ready to use.

Navigate to **Stores > Configuration > Magmodules > Snelstart Integration** to configure and start using the extension.

## 2. Upload Files

---

The Magmodules zip files contain the content that needs to be placed in the app/code/Magmodules/Magmodules/SnelStart/(ZIP content) and in the app/code/Magmodules/AccountingBase/(ZIP Content) folder. Note; this directory structure is case sensitive and needs to be manually created. Below the exact steps on how to extract and upload the files.

**2 A. Extract extension files from the .ZIP files** Extract the extension package ZIP-file using Winzip, WinRar, etc.

**2 B. Upload The unzipped extension files** As the unzipped file only contains the content of the extension itself, you need to create the *Magmodules/Magmodules/SnelStart* and a *Magmodules/AccountingBase/* folder in the app/code/ on the server yourself and place all the content files into these folders.

The final path where the content files are going to be uploaded into will be;

The [Snelstart Integration](#) contents should be uploaded in; app/code/Magmodules/Magmodules/SnelStart

And the Accounting Base should be uploaded in; app/code/Magmodules/AccountingBase/

*If one of our extensions is already installed and you're updating it, make sure to overwrite the existing files of the extension.*

### 3. Connect to your Magento® Webserver using SSH

---

**3 A. Connect** Run the following command in the terminal and enter the user password (please skip this step if you're installing expansion on the local machine):

```
ssh username@domain.com
```

**3 B. Locate The Root** Change your current directory to Magento 2 web root directory running this command:

```
cd /full_path_to_magento2
```

#### 3 C. Start Setup

After that the extension is successfully downloaded, start the setup of the [Snelstart Integration](#) extension by running these commands:

```
php bin/magento module:enable Magmodules_Magmodules/SnelStart  
php bin/magento module:enable Magmodules_AccountingBase  
php bin/magento setup:upgrade
```

If Magento is running in production mode, recompile and deploy static content using the following commands:

```
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy
```

Now you've successfully executed the right commands and the extension is successfully installed, it's ready for configuration. Navigate to Stores ⇒ Configuration ⇒ Magmodules ⇒ [Snelstart Integration](#) and Accounting Bae to start the configuration.

#### Maintenance mode

You may want to enable the maintenance mode when installing or updating the module, especially when working on a production website. To do so, run the two commands below before and after running the other setup commands:

```
php bin/magento maintenance:enable  
# Other setup commands  
php bin/magento maintenance:disable
```

For a complete overview of features and configuration options, see the Snelstart Integration extension on [magmodules.eu](http://magmodules.eu)
